

FOR BEST
POSSIBLE
CALF HEALTH
& GROWTH

THE BEST START

FOR A NEW-BORN CALF, ANTIBODIES FROM MOTHERS MILK ARE CRUCIAL FOR PROVIDING INITIAL IMMUNITY AGAINST DISEASE IN THE FIRST FEW DAYS OF ITS LIFE.

Every calf is at risk of disease early in its life. Illness has less likelihood of occurring if there is effective provision of colostrum followed by best farm practice during its upbringing.

An optimum supply of vitamins, trace elements and probiotics is essential to continue the level of immune protection gained from colostrum.

Selenium, Vitamin E & C along with Copper, Zinc, and Manganese are all important contributors to boosting immune response. The antioxidant effect they have supports the immune system and if a calf becomes ill, they aid in its ability to fight off disease and improve recovery.

AgriSea Animal Nutrition offers a natural and complex balance of these key elements along with additional compounds in a safe and cost effective form that is compatible with all milk forms from day one.

Research has shown that using AgriSea Animal nutrition as recommended will reduce the likelihood of scours and improve weight gain in young calves.

AgriSea has a continuing commitment to bringing you cost effective nutrition solutions and is conducting ongoing research in partnership with Lincoln University to improve better animal health outcomes.

AGRISEA CALF PROGRAMME

The AgriSea Calf Programme provides ongoing immune support for newborn calves after the initial protection from mums colostrum has diminished.

Available as a highly palatable liquid or solid, AgriSea Animal Nutrition is a natural probiotic, prebiotic, provider of essential vitamins, trace elements and minerals necessary for growing strong and healthy calves throughout their lives.

Easy to administer as a non-curdling additive to the milk via calfaterias or feeders, or as a mineral additive to calf meal right through to weaning and beyond.

A totally natural product without additives and preservatives that provides chelated proteins and trace elements in a form that is readily assimilated by the calf with a nil with-holding period.

20 ML PER CALF ON ARRIVAL AT THE SHED

5ML PER CALF PER DAY IN CALFATERIA

100 LTR DRUM TREATS 230 CALVES FOR 12 WEEKS.

PRODUCT REQUIRED PER CALF: 440ML FOR 12 WEEKS

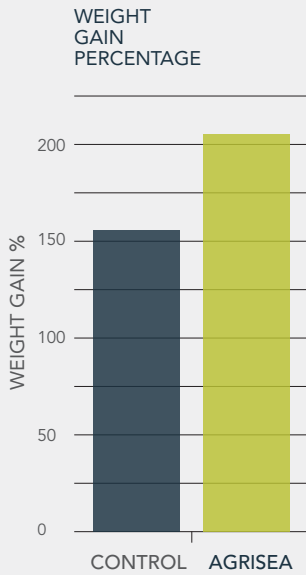

COST: \$5.72 PER CALF (BASED ON 100L CONTAINER PRICE)

COST EFFECTIVE AND SAFE: CALVES LOVE IT

Ready to administer - no mixing required
Will not curdle colostrum or milk
No chemicals or residues
No withholding period
No sweeteners required - calves love it.

AGRISEA ANIMAL NUTRITION HEALTH TONIC

TONIC CONTAINS	THE BENEFITS
EVERY essential amino acid	Improved use of nutrients for growth. Increased energy. Increased immune function. Formation of red blood cells.
Probiotics	Rumen development
Polysaccharide -Prebiotics	Food and energy source for Rumen microbiome
Iodine	
Cobalt	Production of B12 & energy
Vitamins A, C, E & B	

RESEARCH RESULTS

In 2015 the Waikato Institute of Technology conducted a study into the effects of the AgriSea Calf Programme over 12 weeks. Results showed using AgriSea Animal Nutrition produced a 50% increase in weight gain compared to the control group.

The project was completed on a local vet's farm who oversaw the project. The Veterinarian made observations that "The AgriSea calves faeces did not become as soft as the control calves meaning their pen was not as messy and the calves stayed cleaner themselves."

"Effects of Supplementation with a AgriSea Animal Nutrition - Health Tonic on the Microbial Population in the Developing Calf Rumen" Anita Axcell 2014

ANIMAL+

To ensure calves reach their full genetic potential it is essential that they receive adequate trace elements and vitamins throughout the early part of their lives. This is especially important when transitioning from milk to a full grass diet.

AgriSea Animal+ is a powdered combination of Animal Nutrition and Zeolite (a recognised toxin binder) which can be used alone as an additive in meal fed to calves or alone. AgriSea Animal+ is an excellent way of ensuring that calves get the correct amount of trace elements in a palatable, easily assimilated and absorbable form up to, during, and post weaning.

The probiotic effect of Animal + (provides good stimulation for rumen development and the supply of essential vitamins and

minerals, while the Zeolite reduces the potential effects of grass stagers. Available in 20 kg bags with a recommended dose rate of 15 grams per calf per day, Animal+ is a cost effective and convenient way of ensuring that your calves reach their full potential as grown, healthy animals.
